Georgia Exports

U.S. DEPARTMENT OF COMMERCE International Trade Administration Washington, D.C. 20230 August 1984

EXPORTS...

... their importance to the United States economy

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter— currently selling \$200 billion of U.S. goods abroad— and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per \$1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about \$6 billion of their products annually, an additional \$21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for \$1 of every \$4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas

sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to \$57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

Georgia Export Highlights

Georgia's exports of manufactured goods totaled \$2.5 billion in 1981, one and three-fourths times the 1977 level. They rose much faster than production. The state ranked second nationally as an exporter of textile products.

An estimated 25,400 jobs in Georgia were directly related to producing manufactured exports in 1981. About 26,000 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus 51,400 jobs in Georgia were dependent on exports of manufactured goods—about one of every ten manufacturing jobs in the state.

Manufactured exports rose strongly

Georgia's exports of manufactures totaled \$2.5 billion in 1981, an increase of 76 percent since 1977. The state ranked 22nd nationally in sales of these products to foreign countries and accounted for 1.5 percent of the U.S. total. Exports from Georgia firms rose much faster than the 44 percent increase in the state's manufacturing production from 1977 to 1981.

Transportation equipment and textile mill products were the largest exports in 1981, together accounting for 40 percent of total foreign sales of manufactures. In addition, exports of paper products, chemicals, and non-electric machinery were each valued at more than \$200 million.

Foreign sales of transportation equipment, the highest valued export from the state, totaled \$590 million in 1981. Those exports accounted for 12 percent of total production in the industry. Export-related employment totaled 7,500 workers, about one-fifth of the work force in the state's industry. Transportation equipment exports rose by 33 percent in value from 1977 to 1981.

Textile mill exports from Georgia were valued at \$415 million in 1981, placing the state second in the nation as an exporter of such products. In 1977, sales were \$195 million, less than half of the 1981 value. An estimated 3,800 workers were dependent on exports of textile mill products in 1981.

Georgia's foreign sales of paper products more than doubled in the 4 years to a total of \$311 million. Exports accounted for almost 7 percent of production and required 1,500 workers, 5.5 percent of the employment in the industry. Georgia ranked high in the nation as an exporter of paper products.

Two fast-growing export industires in Georgia were chemicals and nonelectric machinery. The former, with exports of \$264 million, rose two times as fast as production from 1977 to 1981. Exports accounted for 9 percent of the industry's growth since 1977. Nonelectric machinery sales overseas were up 83 percent in the period to a total of \$208 million.

The Census Bureau has estimated that the full impact of U.S. exports on Georgia's manufacturing activity was 10.5 percent rather than the 5.3 percent attributable to direct exports as shown in table 3. Estimates including supporting shipments of materials and parts for incorporation in products exported from 50 states are shown in tables 6 to 8. Thus, of the expanded manufacturing output generated between 1977 and 1981, 16 percent—or \$1 out of every \$6—was due to export-related shipments.

Ranked first in peanut exports

Georgia's share of U.S. agricultural exports in FY 1982, including some manufactures of farm origin, totaled an estimated \$706 million, up 48 percent from the FY 1977 level. Much of the growth was attributed to greater sales of soybeans and products, wheat and products, tobacco, and peanuts and products. Soybeans and wheat exports were especially buoyant in FY 1982. The latter increased many times over the FY 1977 value, while soybeans were up 70 percent, having risen from \$99 million to \$168 million. The state was the nation's leading exporter of peanuts valued at \$102 million in FY 1981. Shipments of poultry products, which totaled 63 million, were exceeded only by Arkansas.

(continued on back cover)

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled \$28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show

the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state exportrelated manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exportsin manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturin	ng employment	Total employment, including nonmanufacturing employment		
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment

1981	164,283	2,603.8	12.8	4,794.0	4.7	

^{*} Georgia's export-related manufactures were as follows in million dollars: 1976, 2,557; 1977, 2,723; 1980, 4,653; and 1981, 4,981. About 16 percent of the increase in Georgia's manufacturing production from 1977 to 1981 was generated by growth in export-related manufactures.

Georgia Manufactured Exports, Production, and Employment, 1981

- Georgia's leading manufactured exports were transportation equipment, textiles, and paper.
- These three industries accounted for 53 percent of Georgia's total exports of manufactures.

Georgia Growth in Manufactured Exports

- In 1981, Georgia's manufactured exports totaled \$2.5 billion, one and three-fourths times the 1977 value.
- About two-thirds the increase stemmed from growth in textile products, paper products, chemicals, and transportation equipment exports.

United States Manufactured Exports by State

- California, Texas, Illinois, Ohio, and Michigan continued to be the top five exporters of manufactures in 1981.
- Manufactured exports totaled \$2 billion or more for almost half of the 50 states.

U.S. Manufactured Exports by State

• All 50 states shared in U.S. exports of manufactures.

 Exports accounted for varying percentages of domestic production

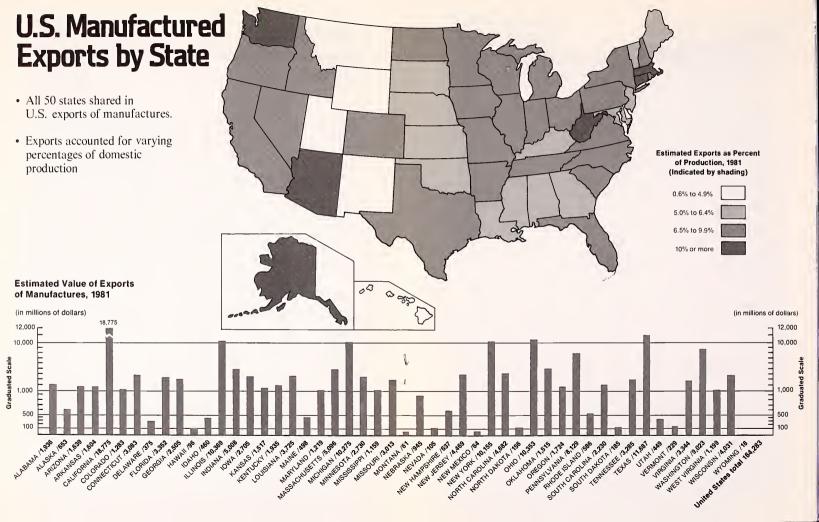

TABLE 4

Georgia Agricultural Exports*

- In fiscal 1982, Georgia's share of U.S. agricultural exports totaled \$706 million, almost one and a half times the 1977 value.
- Soybeans, wheat, tobacco, and peanuts were the leading farm exports from the state.

		Percent increase

Georgia Production, Export-Related Manufactures and Employment, 1981

- About 1 out of 10 Georgia jobs in manufacturing are due to exports.
- Three industries—textile products, transportation equipment, and nonelectric machinery—accounted for 47 percent of Georgia's export-related jobs in manufacturing.

Industry group	Production (million	Export- related manufactures n dollars)	Export related as percent of production	Employment for export- related manufactures (thousands)	Employment for export related as percent of total employment

TABLE 7

Georgia Growth in Export-Related Manufactures

- The 83 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- About one-fifth of the increase in textiles, paper, and chemicals production was generated by growth in export-related manufactures.

United States Export-Related Manufactures and Employment by State

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

			Export-related	manufacture	Employment for export	Total employment related to manufactured exports		
State	Rank as export related in 1981	1977 (million	1977 1981 (million dollars)		Percent of state production 1981	related as percent of manufacturing employment	(thousands)	Percent of civilian employment

Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports

Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 25 percent of the rise in farm sales, and added substantially to the income of Georgia farmers. In this period, the export contribution to each dollar of the state's farm sales increased from 21 to 22 cents.

Fishery exports expanded

Exports of fishery products from Georgia rose from an estimated \$1.5 million in 1977 to \$1.9 million in 1981. Overseas sales consisted entirely of fresh and frozen fish, primarily shrimp. Valued at \$1.2 million, shrimp exports were virtually unchanged from the 1977 value.

Leading clay exporter

Georgia exported clay valued at \$101 million in 1981. Most of these shipments were of kaolin. The state accounted for nearly all of the national output of that type of clay.

Export-related employment significant

Georgia's \$2.5 billion worth of manufactured exports provided direct employment for an estimated 25,400 workers in 1981. Those jobs consititued 4.8 percent of the total manufacturing employment in the state. From 1977 to 1981 the number of workers engaged in the production of manufactures was up 9 percent while employment directly related to exports jumped by 34 percent.

In addition, an estimated 26,000 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 51,400 jobs in Georgia were directly or indirectly dependent on exports of manufactured goods. These jobs represented 9.7 percent of all manufacturing employment in the state.

Half of the jobs dependent on manufactured exports were concentrated in the textile products, transportation equipment, and nonelectric machinery industries. These jobs accounted for one out of four jobs in the transportation equipment industry and one out of five/ten jobs in the nonelectric machinery and textile products industries.

An additional, 54,700 jobs were generated in non-manufacturing industries that supply materials and services supporting manufactured exports. Georgia's total employment related to manufactured exports amounted to 106,100.

It is estimated that Georgia's farm employment related to exports in 1982 amounted to 24,700 or about one out of every five farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the radio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information /Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures, M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer

Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for \$2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of Foreign Agricultural Trade of the United States published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
